Mini refill

length: 60 m
 diameter: 357 mm
 material: 3-layer polyethylene
Biodegradable version:
 length: 40 m
 compliance: EN13432

Maxi refill

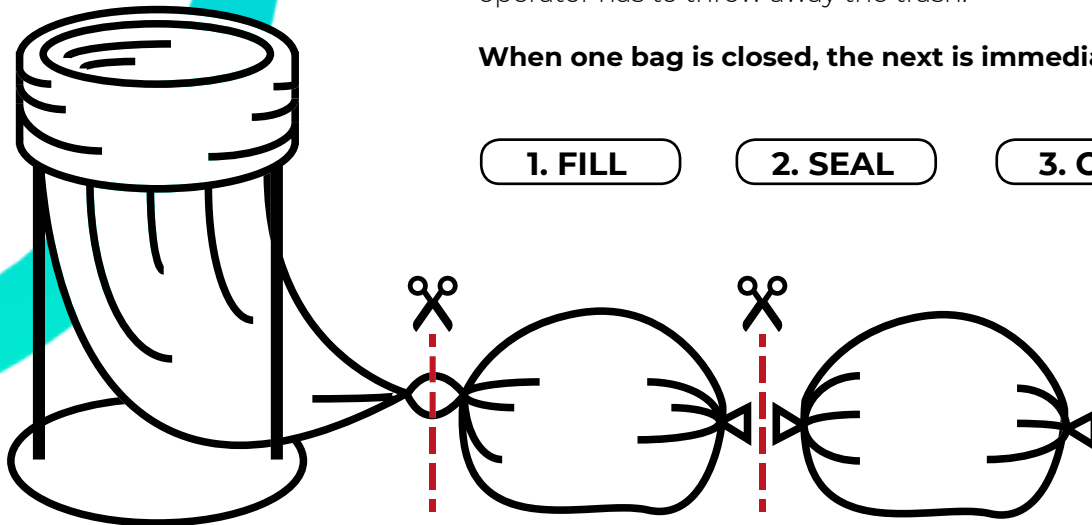

length: 110 m
 diameter: 570 mm
 material: 3-layer polyethylene

CONTINUOUS BAG SYSTEM - HOW IT WORKS?

The Saclò continuous bag system is based on a special “endless” bag (up to 110 metres long) which is unrolled, closed and cut every time the operator has to throw away the trash.

When one bag is closed, the next is immediately ready to use!

Basket for the collection of waste
with the **continuous bag system**.

Saclò ROLLER

Description

Versatile and suitable for all work environments, from industry to commerce, the Roller model is available in the **Mini and Maxi format**, for different filling needs and waste sizes, both equipped with wheels and a raised support surface. It is possible to simplify the sorting of waste, according to the differentiated collection in use, by choosing the refill from the **various colors available**, including the biodegradable version that also for liquid waste.

The continuous bag system makes the Roller basket extremely effective in **optimizing the collection and handling of waste**, both in smaller environments where waste creates disorder, and in larger ones where handling is an important cost factor, both in terms of equipment and personnel.

The **Roller FLEX model**, with **height-adjustable legs**, allows you to comfortably position the Roller basket under tables or worktops, such as in industrial kitchens for the **collection of organic or unsorted waste**, so as not to take valuable space up for operators. The tiltable basket makes the operator's work easier.
